

Simple, Smart, State of the art— Intelligent Digit Identity

3AKey is a Human Interface Device (HID), a compact digital credential with built-in intelligence that validates all incoming communications. Unlike other devices that are required access to USB mass storage - a known source of computer virus and malware infections as well as data leaks, to function correctly; 3AKey is freed from the above security concerns, a reliable and trusted security device a user can depends on.

Models and features:

3AKey:

- HID Interface
- Dynamic digital credential
- Continuous Mutual authentication
- Personal authentication server with advanced duress reporting capability
- Multiple security certificate support

3AKey+:

3AKey+ has a built-in button and an alphanumeric display. With a trusted display it delivers extra benefits:

- Enable user to grant permission for remote server to authenticate with the personal 3AKey
- Verify and sign transaction digitally

Internet transaction is convenient and often save you money, but this virtual wilderness has lots of hazardous and potentially harmful for us naive human. While you must be alert, with 3AKey, it can help to prevent you from falling prey to identity theft, safeguards your online transactions and provides you with digital privacy. For these benefits and more, all you need to do is take 3AKey with you to do your internet banking, online shopping or communicating with your colleagues, friends and families.

Don't be afraid, despite its intelligence, the all round capabilities, including full strength transaction security and continuous mutual authentication, you are the master and 3AKey is only your loyal servant. All 3AKey wants from you is to be taking care of, please bring it with you everywhere you go.
