

FrontOne® JANUS™ is a new generation of internet security solution. It delivers user centric security by protecting the two critical elements in any transaction – the authenticities of the transaction parties and the integrity of the transaction data.

JANUS ID Sentry™ is a collection of strong authentication and simple to deploy toolkit which include our 3AKey. Our continuous mutually authentication enhance security without compromising usability or privacy.

JANUS Data Sentry™ independently verifies those important data in a transaction. It detects data tampering and stop attack on its track.

JANUS is a server side solution that inherently protects the entire organization and 100% of its online users. With a very low impact implementation process, JANUS will deliver stronger security immediately; achieving good ROI while reducing the complexity of privacy and PCI compliances further reduce costs.
